

Internet Access  
Control.  
I've got my eye  
on you.

## WebMarshal

Make your business safe, secure and more productive with WebMarshal, one of the world's most secure web gateway solutions. Why? Because with the volume of web-based security threats it is no longer enough for small and medium-sized businesses to rely on URL filtering to manage workplace web access, manage malicious content and prevent sensitive data leaking out to the wider world.

WebMarshal allows you to control when users can visit certain websites, what they can access, download or upload and how much time or bandwidth they can spend on a site. WebMarshal provides a single secure web gateway offering:

- Web Access Control – management of employee Internet use
- Web Threat Security – protection against web-based security threats
- Data Leakage Prevention – security of confidential or sensitive information.

WebMarshal is an affordable solution that effectively controls and secures Internet use and protects against the popularity of non-work related websites and web applications.

### Why WebMarshal?

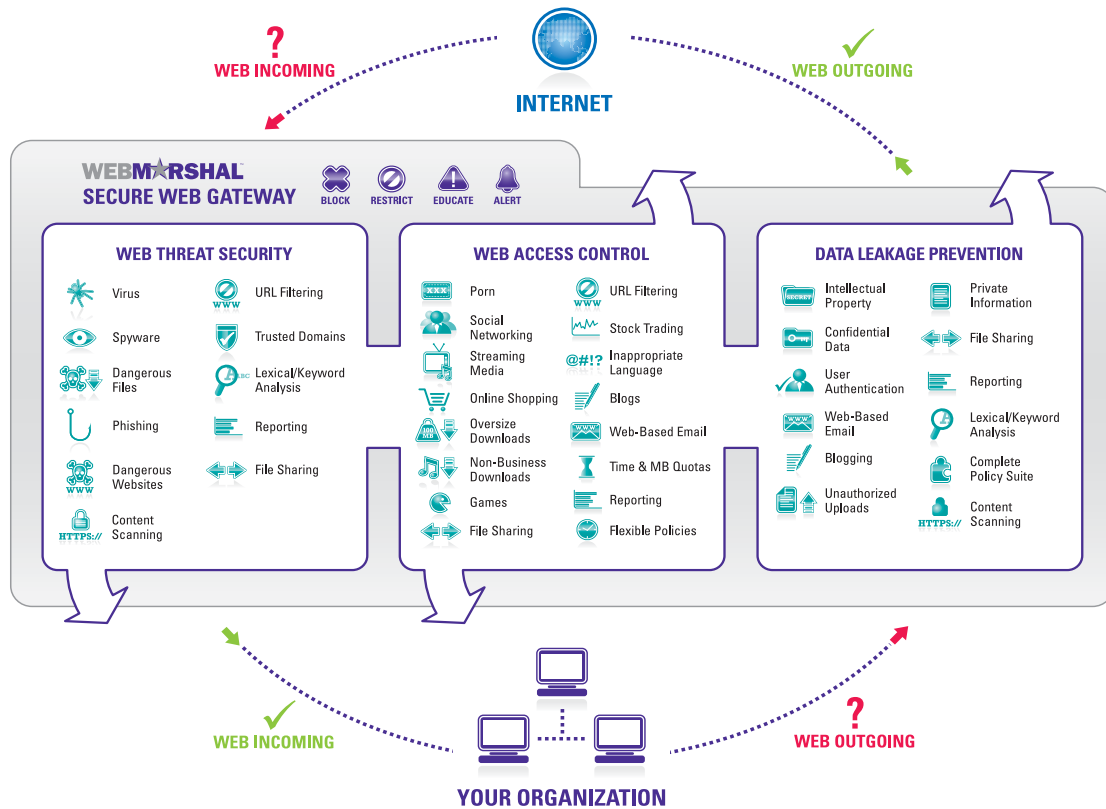

No other web security solution offers the depth of multi-functional web protection and value that WebMarshal provides. With real-time dashboards and a range of information and statistics, you'll know exactly what's going on anytime, anywhere.

*“WebMarshal is an affordable solution to meet all web security challenges facing small and medium-sized organisations.”*

Because Mother knows best

## WebMarshal. Protecting your organisation.

The main features:

- Controls incoming and outgoing web traffic in real-time
- Manages access to websites by content and category
- Blocks web-based threats such as viruses, spyware and other malicious code
- Inspects incoming web traffic such as streaming media, downloading file types and manages bandwidth use
- Scrutinises outgoing web traffic including files and web-based email, to prevent leaks of confidential information and data
- Controls access to web applications such as Instant Messaging and streaming media websites.

And the benefits to your organisation:

- Secures against all Internet threats - blocks viruses, spyware, malware, phishing and other web nasties
- Meets or exceeds compliance obligations – places restrictions on who can transmit confidential information over the web
- Intellectual property remains safe and secure – controls what information users can upload to the web
- Improves network efficiency and saves costs - bandwidth consumption
- Blocks offensive web content; prevents users from inadvertently or intentionally being exposed to pornography, sexist or racist material, demonstrating you have taken all reasonable measures to protect staff
- Creates a safer and more productive workplace - staff spend less time on personal Internet use or non-business Internet activities
- Protects your reputation - users can't embarrass your organisation
- Comprehensive reporting confirms security effectiveness and identifies who has been trying to breach company policies.

To find out exactly how WebMarshal can effectively control and secure your organisation's Internet use, call Mother today.

*WebMarshal sits between your organisation and the Internet, checking all incoming and outgoing web traffic against what you have set as acceptable.*
